PROFILE

Fullstack developer with systems running in production for real clients in Ecuador (clinical management, SRI e-invoicing, multi-branch inventory). Focused on Django/DRF and React/Next.js, with complementary training in cybersecurity.

EXPERIENCE

EcualInventario

Co-founder & Fullstack Developer

Guayaquil, Ecuador

Feb 2026 – present

- Built backend with Django 5 + Django REST Framework + PostgreSQL for a multitenancy SaaS targeting the restaurant industry.
- Integrated an AI assistant powered by Claude (Anthropic) for inventory queries, order management, and automated reports.
- Developed mobile app with Flutter + Riverpod with real-time sync via Firebase.
- Designed multitenancy architecture with per-tenant data isolation and monthly subscription billing.

Freelance

Fullstack Developer

Guayaquil, Ecuador

Jul 2025 – present

- Built Tia Glenda clinical management system (React + MUI + Python + PostgreSQL, 190+ components) — in production.
- Developed an e-invoicing system integrated with Ecuador's SRI tax authority, running in production at novamicktools.com.
- Implemented university exam simulator (React + FastAPI + PostgreSQL) with role-based access and anti-cheating measures.
- Delivered Taller App: workshop management system (Node.js + React) for a freelance client.

Leveling Area — University of Guayaquil

Software Development Intern

Guayaquil, Ecuador

Feb 2026 – Jul 2026

- Led frontend, backend, testing, and deployment of the SimulatorPreguntas platform for institutional use.
- Automated internal registration and report-generation workflows using Python scripts.

EDUCATION

University of Guayaquil

B.Sc. Software Engineering — 9th semester (of 10)

GPA: 9.01 / 10 (grading system: 0–10, minimum passing grade: 7)

Guayaquil, Ecuador

2021 – present

Google / Coursera

Professional Certificate in Cybersecurity

Online

2026 – in progress

Google / Coursera

Professional Certificate in UX Design

Online

2026 – in progress

Hacker Mentor Cybersecurity Academy

Ethical Hacking — Red Team course (8 hours)

Online

2023

PROJECTS

MotoVox

Voice communication app for motorcycle riders

github.com/Mickaell22/MotoVox

Flutter · C · WebRTC · FFI

- Integrated native C code with Flutter via FFI for real-time audio processing with no JVM overhead.
- Implemented peer-to-peer audio streaming via WebRTC without an intermediary server.

QR Shield

Security tool for QR code analysis

github.com/Mickaell22/qr-shield

Python · Chrome Extension

- Built a Chrome extension that intercepts QR scans and queries a Python API to validate URLs for malicious content.
- Developed REST API in Python with domain reputation analysis and phishing detection.

ApplyJob

Job posting aggregation and matching pipeline with LLMs

github.com/Mickaell22/ApplyJob

Python · Playwright · LLMs

- Built aggregation of 7 heterogeneous sources (JSON APIs, RSS, and HTML) normalized into a common schema, with headless Playwright for JS-rendered ones.
- Implemented semantic matching against the candidate profile and LLM text generation; reordering the prompt for prefix caching cut input tokens by ~80%.

SKILLS

Backend: Python, Django, FastAPI, Node.js, Express, C#, Java

Frontend: React, Next.js, TypeScript, Tailwind CSS, Vite

Mobile: Flutter, Dart, Riverpod, Firebase

Databases: PostgreSQL, SQLAlchemy, Alembic, Firebase Firestore, SQLite

Tools: Git, Docker, Linux, VPS (Railway), Cloudinary, Postman

Cybersecurity: Kali Linux, Nmap, Wireshark, ethical hacking fundamentals

Languages: Spanish (native), English (B2 — reading, technical writing, conversational)
