PROFILE

Fullstack developer with systems running in production for real clients in Ecuador (clinical management, order platform, multi-branch inventory). Focused on Django/DRF and React/Next.js, with automated testing and CI/CD, and complementary training in cybersecurity.

EXPERIENCE

Facilito

Guayaquil, Ecuador

Co-founder & Fullstack Developer

Feb 2026 – present

- Built backend with Django 5 + Django REST Framework + PostgreSQL for a multitenancy SaaS targeting the restaurant industry.
- Integrated an AI assistant powered by Claude (Anthropic) for inventory queries, order management, and automated reports.
- Developed mobile app with Flutter + Riverpod consuming the REST API with dio, with secure session storage.
- Designed queryset-level multitenancy: a `for_tenant()` manager on an abstract base model that enforces data isolation before the ViewSet is reached.

Freelance

Guayaquil, Ecuador

Fullstack Developer

Jul 2025 – present

- Built Tia Glenda clinical management system (React + MUI + Flask + PostgreSQL, ~130 components) in production, with 3-role RBAC and 23 test suites.
- Built an order management platform with FastAPI + SQLAlchemy + Alembic, running in production at novamicktools.com.
- Implemented the integration with Ecuador's SRI tax authority for an e-commerce: XML generation, 49-digit access key, and SOAP envelopes sent to the reception and authorization endpoints (test environment).
- Implemented university exam simulator (React + Express 5 + PostgreSQL) with role-based access, anti-cheating measures, and a multi-stage Docker deployment running as a non-root user behind nginx.
- Delivered Taller App: workshop management system (Express + Sequelize + PDFKit + React) with 5 Jest + Supertest suites.

Leveling Area — University of Guayaquil

Guayaquil, Ecuador

Software Development Intern

Feb 2026 – Jul 2026

- Led frontend, backend, testing, and deployment of the SimuladorPreguntas platform for institutional use.
- Automated internal registration and report-generation workflows using Python scripts.

EDUCATION

University of Guayaquil

Guayaquil, Ecuador

B.Sc. Software Engineering — 9th semester (of 10)

2021 – present

GPA: 9.01 / 10 (grading system: 0–10, minimum passing grade: 7)

Google / Coursera

Online

Professional Certificate in Cybersecurity

2026 – in progress

Google / Coursera

Online

Professional Certificate in UX Design

2026 – in progress

Hacker Mentor Cybersecurity Academy

Online

Ethical Hacking — Red Team course (8 hours)

2023

PROJECTS

RestoVentas

github.com/Mickaell22/restoventas-backend

Restaurant sales app with voice-driven ordering

NestJS • TypeORM • React Native • AI

- Built a NestJS 11 backend with TypeORM and migrations, Passport-JWT authentication with guards, and DTOs validated with class-validator.
- Developed a React Native + Expo app using Zustand for global state, with audio capture for spoken orders.
- Implemented natural-language order parsing with an LLM plus speech-to-text, sanitizing the model output against the real product catalog rather than trusting it blindly.

MotoVox

github.com/Mickaell22/MotoVox

Voice communication app for motorcycle riders

Flutter • Native C • FFI • Sockets

- Integrated native C code with Flutter via FFI (compiled with the NDK for ARM64) for real-time noise filtering with no JVM overhead.
- Implemented peer-to-peer audio over local WiFi using raw TCP sockets (tcpNoDelay to minimize latency) and UDP broadcast for room discovery, with no intermediary server.

QR Shield

github.com/Mickaell22/qr-shield

Malicious QR code detection engine (thesis)

Python · FastAPI · Tests

- Built a REST API in FastAPI with a URL heuristics layer to detect quishing, covered by automated tests.
- Designed the L1-L5 layered analysis architecture, with domain reputation integrations planned as the next stage.

ApplyJob

github.com/Mickaell22/ApplyJob

Job posting aggregation and matching pipeline with LLMs

Python · Playwright · LLMs

- Built aggregation of 7 heterogeneous sources (JSON APIs, RSS, and HTML) normalized into a common schema, with headless Playwright for JS-rendered ones.
- Implemented semantic matching against the candidate profile and LLM text generation; reordering the prompt for prefix caching cut input tokens by ~80%.

SKILLS

Backend: Python, Django/DRF, FastAPI, Flask, Node.js, Express, NestJS, C#, Java, PHP

Frontend: React, Next.js, TypeScript, Tailwind CSS, Vite, Material UI, Zustand, Redux Toolkit

Mobile: Flutter, Dart, Riverpod, React Native, Expo, Kotlin

Databases: PostgreSQL, SQLAlchemy/Alembic, TypeORM, Prisma, Sequelize, Firebase, SQLite

Testing: pytest, Jest, Vitest, Testing Library, Supertest, JUnit + Mockito

DevOps: Git, Docker (multi-stage), CI/CD with GitHub Actions, Linux, VPS (Railway), nginx

Cybersecurity: Kali Linux, Nmap, Wireshark, ethical hacking fundamentals

Languages: Spanish (native), English (B2 — reading, technical writing, conversational)
